

## NET JUMPER INSTALLATION & MAINTENANCE INSTRUCTIONS

MODEL NO. GS-W5002

## Features

The series is a specialty climbing structure featuring a flexible center area surrounded by netting. It is made of steel-loaded Nylon cables with UV guard and the landing surface is a textile-reinforced flexible rubber material.

The GS-W5002 features **GS Web technology** which includes the highest steel content and the strongest connection materials in the industry, including a steel-wire core in our edge ropes and connection points crushed in place with over 75 tons of preasure to ensure long life of the games and maximum safety for the children.

GS Web Nets help bring movement, balance, exercise and fun back into the playground.

Ages: 6 to 12 years Capacity: 17 children Size: D: 24' 7'' / 7. 50m H: 4' 11'' / 1. 50m Use zone: D: 34' 5'' / 10. 50m

NET JUMPER Safety area and Fall Height zone

#### Safety area

The requirements for space and safety clearances are taken from BS-EN 1176-1/ ASTM-F1487/ CSA Z614 The use zone for stationary play equipment shall extend no less than 72 in.(1830mm) from all sides of the play structure.

#### Fall Height : 1500mm (from surface)

The Fall height on the extennal surface of a pyramid shaped space net is the highest point attainable on the edge of the structure where an unimpeded fall to the protective surface is possible. This height is based on the centre of gravity height of the maximum user.

#### Metric/Imperial conversion:

3700mm = 12' 1-3/4" 6100mm = 20' 0-1/4" 11160mm = 36' 7-1/4"

NET JUMPER Concrete Foundation

Assemble wooden support frames \* 4 frames (78-3/4" / 2000mm L x 23-2/3" / 600mm W x 19-2/3" / 500mm H)

\*Use 1/2" (min) plywood; not included in package

## Concrete

Pour concrete\* into wooden support frame until flush to top edge Allow 3-5 days for concrete to cure before proceeding to next step.

\*Concrete is to be wet concrete with minimum 25 MPA.

## Remove wood support frame from dry concrete blocks

After concrete has cured enough, remove frame and replace soil in area around footing to subgrade level

**NOTE:** Use anchor plate as guide for exact measurements.

<b>Metric/Imperial conversion:</b> 1750mm = 5' 8-7/8" 3500mm = 11' 5-3/4"	<b>Metric/Imperial conversion:</b> 25mm / 30mm = 1" 200mm = 7-7/8"

# NET JUMPER Attaching Turnbuckle to Anchor Plates

## NET JUMPER Tensioning & Maintenance information

Q · 2 · Q

#### **Maintenance information**

Please tighten rope with Turnbuckle properly. If you strain the net too much, it may cause damage. It is also recommended that subsequent checks on tension should be carried out at monthly intervals and adjusted as required. This will increase the overall longevity of the product.

#### Checking: 1 month

Refer to IPEMA and TUV maintance system.

After Net structure tension is completed, the net will stretch slightly over the first four weeks of use. Following this initial period, the net needs to be fully re-tensioned by Turnbuckle after 1 year.

NET JUMPER Maintenance Installation

A weekly check of the activity net is recommended to ensure that no acts of vandalism have damaged the rope. Periodic checks on tension will assist in the durability of the product.

#### A. General safety measures

On the playground there should be a sign(pictogram) giving the following information:

a) general emergency telephone number;

b) telephone number to contact maintenance personnel;

c) name of the playground;

d) address of playground; and

e) other relevant local information, if applicable.

The entry, exit and emergency paths to and from a playground, intended for use by the public and emergency services, should be accessible and free of obstacles at all times.

NOTE Attention is drawn to local regulations.

#### **B.** Procedures

Defects that occur during operation and which put safety at risk should be corrected without delay. If this is not possible, the equipment should be secured against use e.g. by immobilization or removal.

There should be written operational procedures covering the measures to be taken in the event of accidents, fire and the like.

Until unsafe equipment is repaired and released for use, access by the public should be prevented. Information about accidents brought to the attention of the manager should be recorded on a form that includes the following details:

a) date and tie of accident;

b) age and sex of victim and clothing worn, Including footwear;

c) equipment involved;

d) number of children on site at the time of the accident;

e) description of accident;

f) injury sustained including part(s) of body affected;

g) action taken;

h) witness statements;

i) any subsequent equipment modification;

j) weather conditions; and

k) any other relevant information.

#### C. Routine maintenance

To reduce accidents, the owner or operator should ensure that an appropriate routine maintenance schedule is established, implemented and maintained. This should take into account local conditions and the manufacturer's instructions that can affect the necessary inspection frequency. The schedule should list the components to be maintained and should also give procedures for dealing with complaints and breakdowns.

The routine maintenance of playground equipment and surfaces should consist of preventative measures to maintain their level of safety, performance and compliance with the relevant part(s) of EN 1176. Such measures should include:

a) tightening of fastenings;

b) re-painting and re-treatment of surfaces;

c) maintenance of any impact attenuating surfaces;

d) lubrication of bearings;

e) markig of equipment to signify loose fill finished surface level;

f) cleaning;

g) removal of broken glass and other debris or contaminants;

h) restoring loose fills to the correct level; and

i) maintenance of free space areas.

## **D.** Corrective maintenance

Corrective maintenance should include measures to correct defects, or th re-establish the necessary levels of safety of the playground equipment and surfaces. Such measures should include:

a) replacement of fastenings;

b) welding of welding repairs;

c) replacement of worn or defective parts; and

d) replacement of defective structural components.

## E. Personal safety

Repairs during operation that could put the safety of maintenance personnel of the public at risk, should be avoided.

## F. Equipment alterations

Alterations to parts of a piece of equipment or structure that could affect the essential safety of the equipment should only be carried out after consultation with the manufacturer or a compete person.
